

Research Presentation Check List

Title: Described the experiment

Section #1 Introduction

- Described the focus of the study
- Summarized the context for this study
- Stated the research question of this study
- Explained how results apply to audio engineering, music production, or technology development
- Included citations

Section #2 Experimental Design

- Stated the null hypothesis of the study
- Described the independent and dependent variables
- State the measure used to quantify each dependent variable
- Explained how the stimuli were created for the experiment
- Described the listening test procedures
- Stated the number of trials for each test condition
- Stated what the subjects were asked to do
- Stated how many trials each subject completed during the experiment

Section #3 Results

- Described the raw data in quantitative terms
- Summarized the means, SD, and N for each dependent variable
- Included a table, chart or graph depicting a summary of the data
- Summarized the statistics (p- and t-values)
- State whether or not the results were statistically significant

Section #4 Discussion

- Described whether or not the results support or contradict previous citations
- Explained how the results answer the research question
- Explained what the results suggest about the perception of audio

Section #5 Conclusion

- Described how the findings from this experiment might be applied to audio engineering, music production, or the improvement of equipment design

Section #6 Future Research

- Described the limitations of the design
- A few suggestions for how the experiment might be improved or continued with more research
